What is this? We bought out the Hacker-Central.com website and are liquidating. Flip over the page to learn more. CHECK OUT OUR WEBSITE FOR MORE HACKER SUPPLIES!

FM TRANSMITTERS - RUN YOUR OWN RADIO STATION

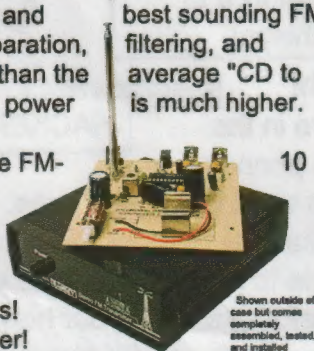

Pirate radio - College/School stations - Activist/Protest
Local/Community - Fun - Pranks! - Streaming audio@ home!

We have a number of professional quality FM radio transmitters for sale. You may hear some pirate FM signals during the HoPE conference. Would you like to set up your own FM broadcasting station? Or perhaps you just want to stream MP3's via a high quality wireless link from your computer to your stereo. If you want to get on the air fast without soldering or learning complicated electronics, check out our FM transmitter offerings.

Ramsey FM-10 Stereo broadcast transmitter

Among pro-hobby FM transmitters, the Ramsey FM-10 is regarded as the best, most hackable and transmitter available. The stereo separation, bass/treble response is vastly better than the FM radio" transmitter, and the output power is much higher.

Check Amazon and Ramseyelectronics.com; they sell the FM-10 in kit form for \$47.95. Assembly is \$75 and an AC power supply is \$10; total=\$133 plus tax and shipping. Our assembled price is LESS than their KIT price and includes 3 freebies! Check the website for info and to order!

10

Shown outside of case but comes completely assembled, tested, and installed in the enclosure!

Get your community radio station on the air in one easy step!

Ramsey FM-25 Digital PLL Stereo transmitter

The FM-25 is the big brother to the FM-10. The FM-25 uses a phase-locked-loop (PLL) chip to ensure a rock solid, stable signal, that is receivable on all radios with no frequency fading, due to the hyper-precise internal frequency synthesis circuitry. Transmit frequency is easily set using switches (instructions included). Comes completely assembled and tested, with a built-in whip antenna, and external jack for adding simple wire antennas to boost range. Ramsey sells the kit for \$140 plus \$75 for assembly and \$10 for a power supply. Our assembled/tested unit is less than the kit price alone!

simple

Mini room bug kit - pick up a whisper a mile away!

This mini room bug kit is the only one worth building. It will pick up the faintest whisper from yards away and transmit it over a mile! 2-Stage bug is more powerful than all other simple bug kits yet is easier to build and use. 30% off sale! - Visit our site for the low sale price! Kit comes complete with PCB, microphone, all components, antenna, preassembled coils and full instructions.

Only \$19.95!

Remote telephone bug - "Infinity Transmitter"

This kit is a fantastic value compared to "infinity bugs" found online or in spy shops. It functions as a whole-house monitor: you place a phone call and it picks up the phone before the first ring, allowing you to listen to everything going on inside the home or office. Perfect as a no-setup alarm system, baby monitor, or for listening in anywhere (get consent first).

Was: \$89.95
Now just \$49.95

Pro Metal Detector

The ability to detect hidden metal is key to finding wires buried in walls, floors, ducts - locating cables buried in the ground, or locating other concealed or obfuscated items and devices. Intercepting ethernet cables in a wall or dropped ceiling or other spaces in-between secured areas is a very useful penetration technique. A pentester must also find and tap into phone or data lines buried underground, outside a target building. Security personnel use these models to do a quick frisk of subjects without having the time and expense of a full-sized installed metal detector. These units are super-sensitive and are comparable to the Garrett detectors but at 1/3 the price! These metal detectors also offer pin-point accuracy, which is unavailable with other detectors, so that you know exactly where the target is. Brand new in retail package. Visit our site for special pricing on this late acquisition from hacker-central.com (we purchased these from a website that closed down)

Quick-Deploy (Decoy) Safety Vest

This blaze-orange safety vest boasts over 500 square inches of warning surface, yet packs down to the size of a pack of cigarettes. Pen testers needing access to restricted rooms report that something as simple as a safety vest, such as those worn by telephone or CATV installers, will get them in to almost any secured area. Enhance your next adventure into underground tunnels, telephone switchboxes, power poles, and other 'forbidden' places with one of these official-looking vests. It is fluorescent orange vinyl, just like the real ones, so you will look 'in place'. You can easily stencil or spraypaint a logo from the agency of your choice on the front or back. The vest is even reversible! One size fits all. We do not condone trespassing. This item is intended for use by construction workers, hunters, crossing guards, etc. to increase their safety. Obtain permission before entering any company's property, including locked terminal boxes, manhole covers, and tunnels. Only \$12.95!

Mace/Pepper Spray Antidote

Proven to cut recovery time from a chemical attack by as much as 80% and reduce pain and swelling! This high-tech antidote is only supposed to be available to police officers, but we have obtained a quantity of stock directly from the manufacturer. The typical chemical attack leaves the victim gasping for breath, with their throat and nose closing up, while the body produces so much extra mucus and the tear glands start to hypertrophy causing temporary blindness. The sprays also itch and turn all exposed skin. The total effect is quite debilitating. Using this antidote can help you recover quickly from a tear gas attack. It is available in one ounce liquid bottles, or in a handy, sealed, 9" x 11" maintained towel-like form.

Radar Detector Tester/Fooler (10Ghz+ Transmitter)

This item uses tunable microwave technology to activate radar detectors within 1/4 mile. This item is useful for generating a signal in the 10 GHz range to test the sensitivity or interference resistance of various radar detectors. It can also be used by amateur radio operators to transmit a CW (morse code) signal in the 10.450 to 10.500 GHz range. The manufacturer warns not to turn the frequency potentiometer adjustment to above the top edge of the amateur band, as this would cause radar detectors to be set off, and might cause a nearby driver to slow down believing that there is an officer on speed patrol nearby. We do not endorse this use of the 10GHz transmitter on the roads. The transmitter comes complete with a remote jack for hidden operation. Comes completely assembled and ready to use. Requires 9v battery to operate.

Oki-900 Hacker Cellphone

In the late 1990's, this is the cellphone every hacker wanted! The phone can listen in on calls, decode DTMF codes (voicemail access, bank PIN, etc), and follow cellular handoffs from tower to tower. We also have new batteries, long and stubby antennas, extended batteries, and extended batteries. See our site for more info!

What the heck is this?

Are you feeling nostalgic for hacking history from the 80's to early 00's? Like yourself, I love attending hacker conferences. Rather than sit in the marketplace pavillion for three days and hawk my wares (warez?), though- I prefer to go to the talks and immerse myself in the culture. I have purchased the remaining stock of the old hacker-central.com website and also have some new items to offer. The website is also chock full of (free) information. I hope you'll look through this short flyer, perhaps visit my website, and drop me an email if you see anything you are interested in. Please feel free to email me even to just chat - I'm not just all about selling things!
